DETAILED ACTION

Continued Prosecution Application

The request filed on 7 April 2003 for a Continued Prosecution Application (CPA) under 37 CFR 1.53(d) based on parent Application No. 09/458,354 is acceptable and a CPA has been established. An action on the CPA follows.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim 13 is rejected under 35 U.S.C. 102(b) as being anticipated by Condon et al (US 5,188,596).

Condon teaches all the claimed subject matter, including a transparent shaft section proximal to a non-transparent balloon section (fig 7). See col. 6, lines 32-36 for non-transparent balloon.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

Art Unit: 3763

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 8-10, 12, and 14-26 are rejected under 35 U.S.C. 103(a) as being unpatentable over Condon in view of Muni et al (US 5,316,706).

Condon teaches all the claimed subject matter except for the sizing of the device, and that it is made out of PEEK with particular properties. As discussed in prior office actions, it would have been obvious to change the size of the device slightly as it is within the level of ordinary skill in the art to change sizes to fit different anatomy of different patients and or for use in different body locations. Further, Muni teaches the use of transparent PEEK with the claimed crystallinity and that it is amorphous. Again, as discussed in previous office actions, it would have been obvious to choose PEEK as a well-known transparent material suitable for use in catheters, and also as previously mentioned, the percent transmission of visible light is considered to be inherent to transparent forms of PEEK.

Response to Arguments

Applicant's arguments have been considered but are moot in view of the new ground(s) of rejection.
